For some reason the collapsed navbar icon does not expand when clicked on on smaller screens. I copied the example from bootstrap 5 and made sure to include bootstrap css/js and jquery.

```
class NavBar extends Component {
  render() {
    return (
      <div className="NavBar">
        <nav className="navbar navbar-expand-lg navbar-dark bg-dark">
          <div className="container-fluid">
            <button className="navbar-toggler" type="button" data-bs-
toggle="collapse" data-bs-target="#navbarNavAltMarkup" aria-
controls="navbarNavAltMarkup" aria-expanded="false" aria-label="Toggle navigation">
              <span className="navbar-toggler-icon"></span>
            </button>
            <div className="collapse navbar-collapse" id="navbarNavAltMarkup">
              <div className="navbar-nav mx-auto">
                <HashLink className="navbar-brand" to="/#app">
                  Site
                </HashLink>
                <HashLink className="nav-link" to="/#about">
                  About
                </HashLink>
                <HashLink className="nav-link" to="/#skills">
                  Skills
                </HashLink>
                <HashLink className="nav-link" to="/#experience">
                  Experience
                </HashLink>
                <Link className="nav-link" to="/calculator">
                  Calculator
                </Link>
              </div>
            </div>
          </div>
        </nav>
      </div>
    );
  }
}
```

javascript html css reactjs bootstrap-5

From your description and the code you give above, it should work. Check out the output code to find out the issue. – Gellio Gao Feb 16, 2021 at 0:56

I found an answer here that works via react hooks: <https://dev.to/johnotu/how-to-toggle-bootstrap-navbar-collapse-button-in-react-without-jquery-joo>

3

```
import React, { useState } from 'react';
import Logo from '../images/logo_512x512.png';

const TopNav = props => {
  const [isNavCollapsed, setIsNavCollapsed] = useState(true);

  const handleNavCollapse = () => setIsNavCollapsed(!isNavCollapsed);

  return (
    <nav class="navbar navbar-expand-lg navbar-light bg-light rounded">
      <a class="navbar-brand text-info font-weight-bolder" href="/">
        <img src={Logo} alt="Logo" width="36" height="36" className="vertical-align-middle" />
        <span className="">Discounter</span>
      </a>
      <button class="custom-toggler navbar-toggler" type="button" data-toggle="collapse" data-target="#navbarsExample09" aria-controls="navbarsExample09" aria-expanded={!isNavCollapsed ? true : false} aria-label="Toggle navigation" onClick={handleNavCollapse}>
        <span class="navbar-toggler-icon"></span>
      </button>

      <div class={` ${isNavCollapsed ? 'collapse' : ''} navbar-collapse` }
id="navbarsExample09">
        <a className="nav-link text-info" href="/contact">Support</a>
        <a className="nav-link text-info" href="/login">Login</a>
        <a href="/request-demo" className="btn btn-sm btn-info nav-link text-white">Request demo</a>
      </div>
    </nav>
  );
}

export default TopNav;
```

The problem is we didn't add the bootstrap js file so, add this in App.js file

3

```
import 'bootstrap/dist/js/bootstrap.bundle';
```

1 I added but still not working.. – [ErShakirAnsari](#) Nov 17, 2021 at 17:56

you must have to import this. `import 'bootstrap/dist/js/bootstrap.bundle';`

0

```
<nav class="navbar navbar-expand-lg navbar-light bg-light">
```

Navbar Home Link Dropdown

- Action
- Another action
-
- Something else here
